

Group WorkStreams & Agile Sprints

Kanban for the everyday. **Scrum** for delivery. One platform for both.

Group WorkStreams gives every function in your organisation its own Kanban workflow. Agile Sprints gives delivery teams a disciplined home for Scrum, with stand-up reporting built in. Both run on the ZedX Apps Platform, with one login and one consistent interface.

The screenshot displays two overlapping interface panels. The background panel, titled 'Group WorkStreams > Staff onboarding', features a Kanban workflow with three columns: 'Requested', 'In progress', and 'Done'. Under 'Requested', there are two items: 'Building pass' (assigned to 'Estates' and 'JO') and 'Payroll set-up' (assigned to 'Finance' and 'RK'). Under 'In progress', there are two items: 'Induction plan' (assigned to 'HR' and 'AM') and 'Laptop and acc...' (assigned to 'IT' and 'SB'). The 'Done' column contains one item: 'Contract signed' (assigned to 'HR' and 'AM'). The foreground panel, titled 'Agile Sprints > Sprint 7 · day 6', shows a 'Burndown' chart with a solid blue line and a dashed grey line, indicating progress. To the right of the chart is a 'Today's stand-up' summary: 3 stories done (green checkmark), 3 in progress (blue circular arrow), and 1 blocked (red exclamation mark).

Give every team its own **flow of work.**

Set up a workstream for each function of your organisation, from HR and finance to IT, estates and governance. Every workstream's tasks sit on a Kanban board, so anyone who needs to can see where things stand.

How it works

- 1 Set up a workstream for each function**
Each part of the organisation gets a workflow of its own.
- 2 Put its tasks on a Kanban board**
Every task sits in a column showing its stage.
- 3 Work the board together**
Colleagues and outside partners with guest logins work on the same board.
- 4 Keep leaders informed**
Link to Project Portfolios for structured updates. Export to Excel any time.

Why a board suits operational work

- See the whole flow.** Nobody has to ask where a request has got to.
- Spot where work waits.** Cards piling up in one column show the bottleneck.
- Finish before starting more.** Teams pull new work in when they have room.

Runs alongside Agile Sprints

Teams with a mixed delivery model keep Scrum work in Agile Sprints and operational, ad-hoc work in Group WorkStreams.

Ideas for workstreams

Freedom of Information requests Government	Complaints handling Government	Student support cases Education	Course approvals Education
Supplier onboarding Business	Marketing requests Business	Recruitment campaigns Any sector	Health and safety actions Any sector

Disciplined sprints, **without the admin.**

One structured place for epics, stories, sprints and releases, with real-time progress and stand-up reporting built in. It stays lightweight, so the process never gets in the way of the work.

Plan

Epics and user stories in a prioritised backlog. Estimate in story points and plan each sprint against team capacity, with the sprint goal clear before work starts.

Run

A configurable sprint board shows work in progress, finished work and anything blocked. Stand-up reporting is produced automatically, and progress is tracked in real time.

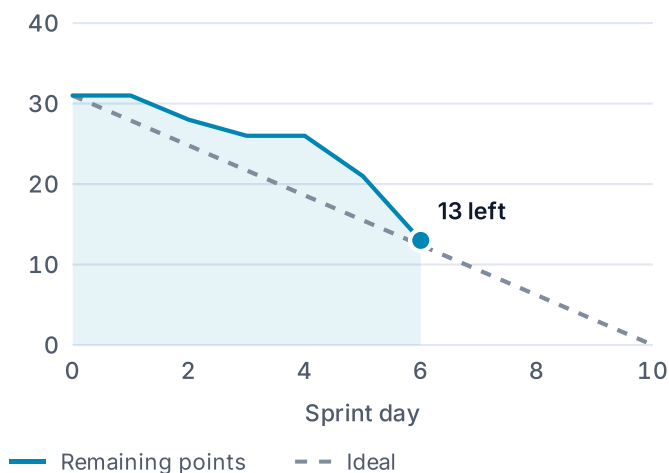

Review

Sprint completion, velocity and carried-over work for every sprint, plus the trend across sprints. Support for sprint reviews.

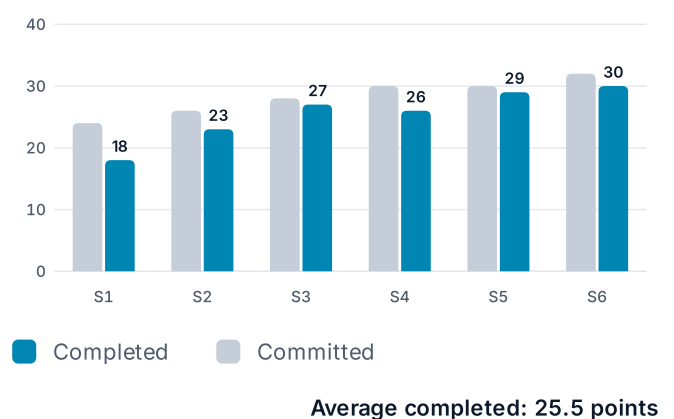

Release

Releases that span one or more sprints, with each story assigned to the version it will ship in. Epics laid out on a timeline.

Burndown, sprint 7 (sample)

Velocity, last six sprints (sample)

Stand-up summary, written from the board

- ✓ Done since the last stand-up: Reception check-in screen (8).
- 🔄 In progress: 2 stories, 8 points.
- ⚠ Blocked: Host notified when a visitor arrives.

Metrics are there to help teams learn and improve, not to police them.

Role-based permissions control who sees and changes what. Link to Project Portfolios and leaders get periodic summaries, not task-level detail.

Flow or time-box? Or both.

	■ Group WorkStreams	■ Agile Sprints
Best for	Operational, ongoing and ad-hoc work	Planned delivery using Scrum
How work moves	Continuously, across a Kanban board	In time-boxed sprints
How it is organised	A workflow for each function	Epics, user stories, sprints and releases
Progress	The board shows where every task stands	Real-time progress, stand-up reporting, velocity
Reporting up	Either can link to Project Portfolios, which receives periodic summaries rather than task-level detail	

The ZedX Apps Platform

- 🔑 **One login.** Microsoft Entra ID single sign-on or a ZedX ID; one interface in every app.
- 🛡️ **Fine-grained access.** By app and by module, with hierarchical permissions.
- ☁️ **Hosting your way.** Microsoft Azure, hosted by Swiftpro with data in the UK, or in your own subscription.
- 📊 **Dashboards.** Built in, with Power BI integration.
- 👤 **Room for partners.** External users join with their own Entra ID or a guest login.
- 🔗 **Set up for your sector.** Preconfigured editions, configured further to fit.
- 📄 **Data in, data out.** Import from CSV; export to Excel and PDF.
- 📱 **Any device.** Fully usable in a mobile browser.

Editions

- 📄 **Government:** central and local government, arm's-length bodies, agencies, embassies and hospitals.
- 🎓 **Education:** universities, further education colleges and schools.
- 🏢 **Business:** from SMEs to large corporations.

Licensing

- ✓ Per app, per user, with hosting and support.
- ✓ Per app, in packs of 10 or 100 users.
- ✓ Unlimited users of an app, on your own server or Azure.
- ✓ Every current and future app, unlimited, on your own server or Azure.
