

— Independent promotional brochure • two ZedX apps

Workflows for everyday work. Sprints for planned delivery.

Group WorkStreams handles the steady flow of operational work, with a Kanban board for each function. **Agile Sprints** plans and runs Scrum delivery, from backlog to sprint to release.

Catering & Vending Machine Issues

Agile Sprints Sprint 3, Attendance Capture: each story carries its epic, priority and story points.

Real screens from the ZedX demo environment, with its sample college data. This brochure is produced by an independent promotional partner, not by Swiftpro Corporation Ltd, which develops ZedX.

Continuous work, organised by function

Set up a workstream for each function, such as complaints, catering, HR requests or finance queries. Its tasks sit on a Kanban board, with stages that fit that kind of work.

Workstreams

+ New

Name	Portfolio	Active Epics	Active Tasks
 Bursary Software Module Development	Technology (Student Support Apps Platform)	4	0/36 0/6
 Career & Apprenticeship Guidance	Student Support	0	0/8
 Catering & Vending Machine Issues	Campus Operations	0	0/16 0/2
 Classroom Equipment Requests	Facilities & Resources	0	0/15 0/2
 Complaints & Compliments Log	Quality Assurance	0	0/36 0/6
 Contract & Payroll Setup	Accounts & Finance	0	0/3 0/1
 Course Placement Adjustments	Admissions & Enrolment	0	0/3 0/1

Group WorkStreams The workstreams list: one workstream per function, each filed under a portfolio.

Suits

Operational teams handling a steady flow of requests, cases and issues: continuous-flow, ad-hoc and non-Scrum work.

What teams can see

Each workstream's portfolio, active epics and active tasks, and an Insights dashboard of work items per workstream, split into critical and non-critical.

How work is organised

Each workstream has its own board and stages, set from New Stage and Edit Stage. In the demo, the complaints log runs through five stages; catering issues need three.

Alongside other apps

Run it next to Agile Sprints where teams mix delivery models. Project workstreams in Project Portfolios can link to it, with progress summarised through structured project updates.

Planned delivery, sprint by sprint

For teams working in Scrum. Epics and user stories sit in a prioritised backlog, are estimated in story points and are planned into sprints against the team's capacity.

Work Items : Backlogs

Agile Sprints The backlog: Ideas & Intake, Refinement Needed, Ready for Sprint.

Suits

Delivery teams working in Scrum or sprint-based Agile, where work is planned before it starts.

The sprint

A sprint board with configurable workflow stages shows work in progress, completed and blocked work. Daily stand-ups and sprint reviews are supported, with online automated stand-up reporting.

Releases and metrics

Releases span one or more sprints, with stories assigned to planned versions. Metrics cover sprint completion, velocity and carried-over work, with trends across sprints.

Alongside other apps

Use it on its own, or link it to Project Portfolios: sprint progress is summarised through periodic updates, without task-level detail.

Continuous workflow or sprints?

	Group WorkStreams	Agile Sprints
Incoming work	Arrives continuously: requests, cases, issues and jobs.	Planned in advance as epics and user stories in a prioritised backlog.
Planning cadence	No fixed cycle. Items move through their workstream's stages as they are handled.	Sprint by sprint, estimated in story points against team capacity.
Reviewing progress	Active tasks per workstream and a dashboard of critical and non-critical items.	Stand-ups, sprint reviews, completion, velocity and carried-over work.

What leadership sees

Leaders follow delivery in a third ZedX app, Project Portfolios. Project managers submit structured updates at agreed intervals, such as monthly or quarterly: delivery confidence as a RAG status, narrative progress, achievements, blockers, risks, dependencies and support required. Dashboards show delivery health across portfolios, programmes and projects. Progress from either app arrives through these periodic updates, not as task-level detail.

What adoption involves

Sign-in and access	Single sign-on with Microsoft Entra ID or a ZedX ID; external users with their own Entra ID or a guest login; access to individual apps or modules, with hierarchical permissions.
Hosting	Per-user and per-block licences include hosting. Unlimited-user licences run on your own server or Azure subscription.
Integration	Where ZedX runs on your own servers or Azure, Swiftpro Digital can integrate it with Oracle, SAP ERP or, for education, Tribal, as a separate service.
Licensing	Per app per user; per app in blocks of 10 or 100 users; per app for unlimited users; or every current and future app, unlimited. Swiftpro quotes for each.

Request a demo

Use the contact form at zedxapps.com. The request goes to Swiftpro, the company that develops ZedX, who will get back to you. Customers log in at zedx.net.
